

=== Evidence of Cleaning Certificate (ECC) ===

A COMPLETED COPY OF THIS CERTIFICATE MUST ACCOMPANY ALL RETURNS TO SMAR INTERNATIONAL CORPORATION

Please review instructions below for proper completion of this form.
You can fill just one ECC per RMA number.

RMA Number:	
Specific Cleaning procedure employed, if applicable:	
Company Name: Procedure Used:	
Is a MSDS Attached?	YES NO
Names of possible residual chemicals involved that could be harmful to humans that may still be present after cleaning:	
What are recommended precautions to handle the device:	
Additional comments:	

I herein confirm and have read and completely agreed with the Terms and Conditions in the next page and that I have evidences that the equipment has been cleaned and is proper for handling without any chemical hazards accordingly to instructions given above.

Full Name:

Title:

Date:

IMPORTANT NOTE: IN ADDITION TO THE SMAR REQUIREMENTS FOR CLEANING THE CUSTOMER IS RESPONSIBLE FOR MEETING ALL APPLICABLE DEPRATMENT OF TRANSPORTATION LAWS, REGULATIONS ETC. REGARDING SAFE SHIPMENT OF EQUIPMENT AND TRACEABILITY.
EQUIPMENT REQUIRING CLEANING UPON RECEIPT AT SMAR WILL BE SUBJECT TO CLEANING CHARGES OR DISPOSAL FEES.

Equipment that has been in radioactive service can NOT be returned at all.

Terms and Conditions

Objective: To assure items returned to Smar International Corporation (SI) are in a condition safe to handle without additional protection or precautions.

Scope: Applies to all equipment returned to Smar International Corporation

Method: You must have an RMA (Return Material Authorization) provided by SI before returning any type of equipment to SI. Call 713-849-2021 to acquire an RMA Number and for clarifications.

This number must appear on the outside of the Box and on the Certificate of Cleaning. A copy of the completed Cleaning Certificate must accompany the equipment being returned.

Cleaning procedure:

Smar equipment is of a robust design and is intended for use in industrial applications of various services. For most cases a simple wipe down with warm soapy water and towel drying may be enough. Oils and Greases may be removed with standard petroleum or citric based solvents.

However, equipment is not to be submerged in any solvent without Smar approval. Water submersion may be required in the event the unit has been in service in a caustic or acidic environment.

The front cover of the instrument should be securely tightened prior to cleaning to assure cleaning fluids do not enter the main electronic circuit boards. Plugging/capping other possible openings to the instrument internals is advised.

Due to the wide range of possible services Smar cannot recommend a single overall cleaning procedure. The best cleaning procedure will most likely be the customers standard for similar equipment in like service and exercising common sense. Smar equipment is electronic and needs to be removed from any power source prior to cleaning and thoroughly dried after cleaning.

In the event the instrument requires more than a clean white towel wipe off drying then a forced air dry or oven dry may be implemented, provided surface temperature of Smar equipment does not to exceed 82 °C = 180 °F.

If there are any concerns regarding how the equipment may be cleaned, or if a given cleaning procedure is permissible, please Contact Smar International Corp. 713-849-2021

If after thorough cleaning there may be residual chemicals considered harmful to humans on the instrumentation, then a MSDS for these chemicals must accompany the equipment with a copy of the cleaning procedure that was employed by the sender.

Note: It will most likely be impossible for SMAR to service equipment in this condition, but we need to beware of the condition for safe handling, and disposal if required.

A responsible Operator or Manager must sign the Evidence of Cleaning Certificate above.

Equipment that has been in radioactive service can NOT be returned at all.
